

Marine Water & Wastewater *Solutions*

When you buy a BARR Plastics custom marine tank, you can ensure that you are getting a top quality product backed by many years experience and over 2250 tanks in the field. BARR tanks are all over the world. We are highly qualified to manufacture potable water & waste holding tanks, designed to your specifications, using engineering calculations for operating head pressure. BARR uses the latest in extrusion welding technology, with our shop foreman and lead fabricators all certified to DVS plastic welding standards.

Using the highest quality HDPE and polypropylene copolymer materials, your custom tank wall thickness will range from 3/8" to 3/4" thick, depending on overall size and operating pressure. We also use only high quality heavy duty fittings and inspection ports to ensure you get an all-round quality tank that will serve you on your boat for years to come.

All tanks over 15 gallons will have internal baffles and will have the tank lid internally welded to all baffles. This keeps the lid from bulging under pressure. BARR Plastics Inc. also backs up all tanks we build with a one year limited warranty against manufacturing defects.

Call our office today to learn more about ordering a custom water or waste holding tank for your boat. BARR has built marine tanks up to 2,750 USG and would be happy to discuss your specific project needs.
